

HUSKEE SWAP

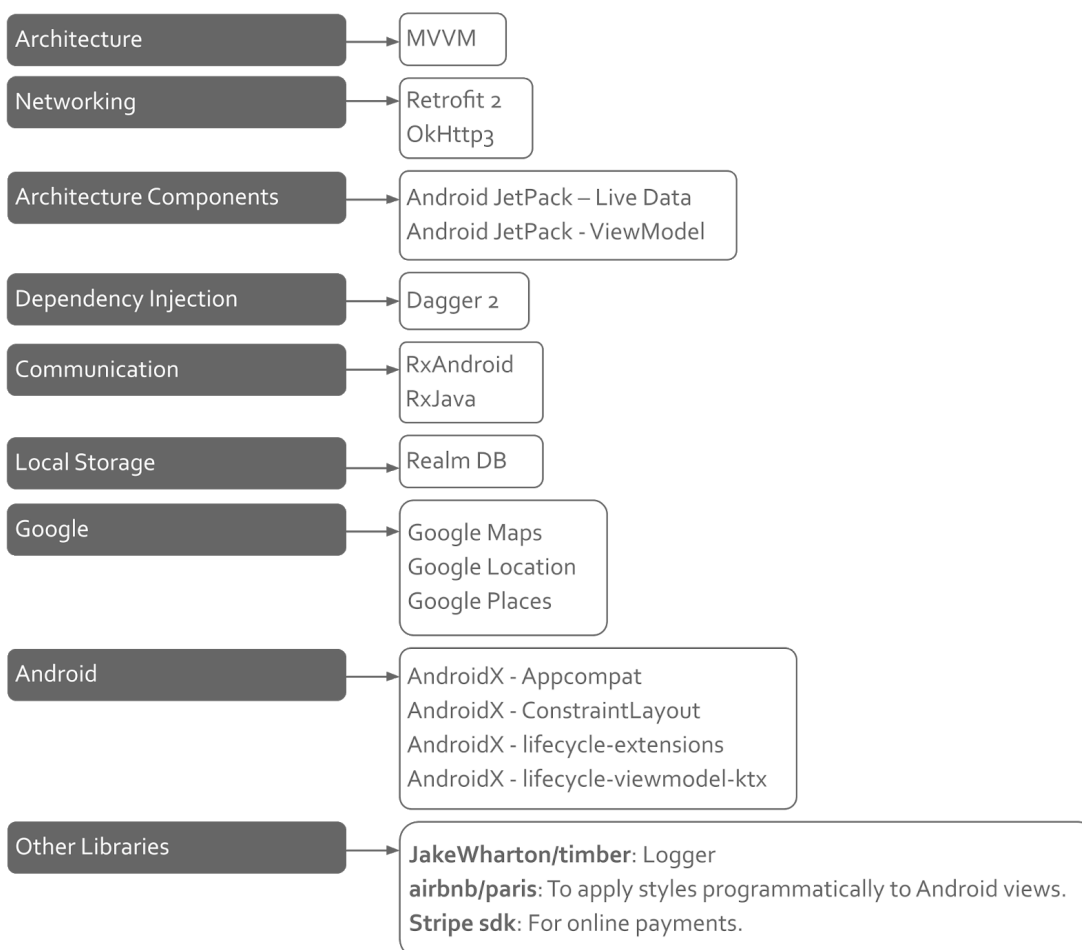

HuskeeSwap is an app that enables people to eliminate disposable cups while borrowing sustainable well-made cups. HuskeeSwap application provides a mechanism to find cups in the cafes nearby, to borrow or return the cups. Users can find cafes nearby by interacting with a customized map and borrow and return cups by scanning QR code with the camera. Payments with credit cards are also securely possible by connecting to the backend infrastructure of the system.

TECH STACK

DOSHITERU

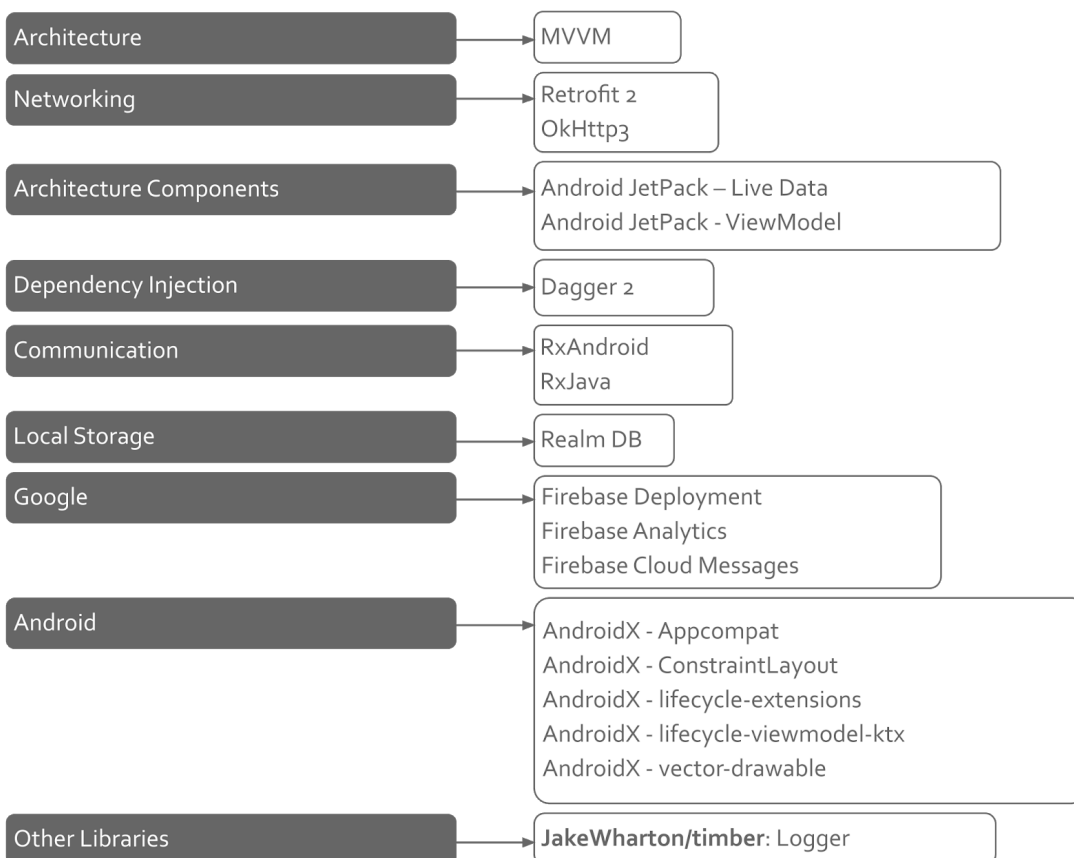

This application was developed for HITACHI and aimed to keep a close eye on the elders by displaying data taken from activity sensors installed in their homes and Hitachi appliances. The app connects to a REST API and authenticates Users through the OAuth2 protocol. The UI of this app contains multiple graphs with chronological and real-time data retrieved from the backend side. These 2D-graphs were built with highly customized views and Android Canvas drawings. During development and testing, it was deployed with CircleCI automated deployment configuration and Firebase Distribution service.
